Lancaster Farming

VOL. 8 NO. 12 Lancaster Farming, Saturday, February 23, 1963 $2 Per Year

WORKING ON RECORDS IN THEIR home office are Mr. and Mrs. Jay Risser. Mrs. Risser prepares lactation and monthly herd average records for the Red Rose Dairy Herd Improvement Association newsletter which goes out every month. Jay is preparing his daily report which is mailed to the Pennsylvania State University for processing on electronic equipment every day. The newsletter prepared by Mrs. Risser (Lois Ann) is mailed to every member in the association. L. F. Photo.

I Ride With The DHIA Tester

DHIA Records Are A Tool The Dairyman Must Use

By: Jack Owen

Editor's Note: This is the second in a series of articles dealing with Lancaster County businesses related to agriculture. The writer will spend a day riding with personnel who serve the farmer but who do not actively engage in the business of farming. The articles are an attempt to bring the farmer a report of the job of service personnel before they reach the farm. Other articles will be printed in the following weeks.

Our "day" began at 5 15 p m I met Jay Rissler, head tester of the Red Rose Dairy Herd Improvement Association, at the farm of Jay Landis, Lancaster R6, just about 15 minutes before milking time

In the early days of milk testing. Jay told me, when the tester stayed over night with the farm family, he was expected to arrive at the farm in the middle of the afternoon to get all the information copied from the farmer's records to the tester's book, but since all records are now processed on electronic computers, there is much less copying to do, and the tester does not have to get to the farm until just before milking time.

Jay found two bales of straw for his sample bottle tray and a bale twine to hang his scales, and he was ready for business.

While Jay Landis washed the first cow s udder and put the milkers on, Jay Risser got freshening, breeding and dry dates from the barn charts. "This is the first thing I do whenever I go to a farm," Jay said The records were in good shape on this farm, and it didn't take long

Landis makes good use of his records to cull his lower producers, and as a guide in feeding his better cows. "It is important to have good records, but they are just a tool. If you have a shovel and it stands against the wall, you won't get any work out of it." Risser said "Dairy records are just a tool like any other tool

(Continued on page 6)

Poultry Meet Is Scheduled

A panel discussion of Poultry House Construction and Automatic Equipment will be the feature of an educational meeting scheduled by the Lancaster County Poultry Association on February 28.

The meeting, scheduled for 7:45 in the Poultry Center on Roseville Road, will open with a discussion on marketing of eggs by Earl Hess, Hess Brothers, Ephrata. In his talk on "Pennsylvania Egg Business in the Balance", Hess will discuss competition from other areas of the country, tomorrow's markets and how Pennsylvania eggs will fit into present and future trends in production and marketing

The panel of four successful poultrymen from the county will be moderated by Carl Dossin, Extension Poultry Specialist from the Pennsylvania State University.

Discussing such points as lagoons for handling manure, ventilation systems, dropping pits, belt gathering of eggs and types of feeds will be George Weaver, and David Musselman, both of New Holland; Walter Augsburger, Reinholds R1, and Jack Huber, Lititz R3.

Another special meeting, to discuss pullet raising, is planned by the association for March 28 at the Poultry Center.

Farm Calendar

Feb 25 — 7:15 p m — Egg-O-Rama meeting in Penryn fire hall

7:30 p m — Northeast 4-H tractor club meets in the shop of Allen Matz, Denver

Feb. 26 — 1:30 p.m. and 7:00 p.m. 4-H leaders clothing construction course. Lancaster Production Credit Assoc, Roseville Road.

Feb. 27 — 9:30 a.m. to 3 p.m. — County Soils and Crops day in the Guernsey Sales Pavilion, Lincoln Highway east of Lancaster.

(Continued on page 4)

Co. Soils Day Is Next Week

Four agronomy experts will be on the program of the annual Lancaster County Soils Day next Wednesday at the Guernsey Sales Pavilion, Lincoln Highway east of Lancaster.

Time will be allotted from 9 30 to 10 a m for inspection of displays and exhibits by commercial firms of the county.

Beginning at 10 a.m, Milford Heddelson, extension agronomist from the Pennsylvania State University will use soil profiles to illustrate his talk, "Know Your Soil Type". He will be followed by James Eakin, chairman of agronomy extension at PSU who will discuss the value of soil testing.

John Baylor, extension agronomist will talk of "Better Forage Crops," and George Berggren, extension agronomist, will present the "Latest in Weed Control" during the af-

Swine Producers Show And Sale Is Next Week

The Lancaster County Swine Producers Assn have planned their 5th Annual show and sale to be held at the Lancaster Stock Yards, Tuesday, March 5, 1963

Reflecting the market trend for heftier meat-type hogs, the show committee has increased the liveweight of judging classes 10 pounds in the lightweight division The increase places a 190 lb minimum and a 220 lb maximum in the lightweight judging classes and a 221-250 lb spread in the heavyweight divisions

There will be classes in the following breeds with crossbred hogs being shown in the class of their sire, Berkshire, Chester White, Duroc-Jersey, Hamshire, Landrace, Poland China, Spotted Hogs, and Yorkshire Judging features single, trio and truckload classes.

To further emphasize the

Broiler Outlook Shows Increase

Production of more poultry meat is predicted for "63". Production of both broilers and turkeys is expected to be higher in '63 than in 1962, according to a report this week from the Penn State extension marketing service.

More broilers will be marketed the first quarter in "63" than in the first quarter of 1962. Placements in the latter part of '62 were above 1961. Eggs set the first three weeks of January for hatching of broiler chicks in 22 major states ranged from 2 per cent below to 2 per cent above year ago levels for the corresponding

SPABC Reports Highest Volume Service On Record

The Southeastern Pennsylvania Artificial Breeders Cooperative reported a record number of first services during the past year at the annual meeting in Leola Memorian building Thursday night

The reported 157 first services is an increase of three per cent over 1961 despite the decrease in cow numbers over much of the cooperative's service area.

In a report of management, David Yoder explained that rising costs forced a $1 00 increase in service fees on January in order to maintain working capital and take stock from the inactive members and put it in the hands of active members. A total of 911 shares of inactive stock was redeemed last year and 833 new members were added This drop in membership is about equal to the state and national trends, Yoder said.

Breeding fees during the year totaled $789,642 with capital assets at $443,514 Net income was $25,749 which was distributed at the rate of 16 cents per $5 00 first service.

Henry E Kettering, Lititz R3, was elected director of the organization for a three year term.

District delegate posts, all

FIVE-DAY WEATHER FORECAST

Temperatures during the next five days are expected to average seven or more degrees below the normal range of 27 at night to 44 in the afternoon. Some moderation in temperature is expected during the first half of the period turning colder again near the end of the period. Precipitation is expected to total less than a tenth of an inch (melted) occurring as light snow near the end of the period.

SHEEP 16 Not enough on sale to establish a market.

New Holland Auction

Thursday, February 21

Cattle: 1045. Compared with a week ago slaughter steers steady to 50 lower. Most decline on weights over 1,250 lbs. Utility cows about steady, canner and cutter 50 lower. Bulls about steady.

High choice and prime 900-1,000 pound slaughter steers 26.00-26.85; 1,300-1,400 lbs. 24.75-25.60. Choice 950-1,350 pound 24.75-26.00. Good and low choice 22.75-25.00; Standard 20-23.

Cutter and utility cows 14.-50-16.50, few to 17. Canner and low cutter 13.00-14.50, with shelly canner 11.00-13.-00.

Utility and commercial bulls 20 00-22 50; good 22.00-24.00.

Medium and good 665-850 pounds feeder steers 20.85-23.35. Two lots good 585-615 pounds 23.35-24 25. Lot medium and common 706 pound holstein feeders 18.25.

Calves 307. Vealers steady. 39 00. Choice and prime 39 00-Good and choice vealers 34.00-43 00, few to 45 50.

New Holland reported receipts of 103 cows, five stock bulls and five stock heifers at the February 20 auction of dairy cattle The market was steady to weak.

Fresh Holstein cows brought $275-400; Guernseys $150-220, and other breeds $175-225.

The Feb. 18 sale of horses, ponies and mules had 250 head on sale. The trend was steady.

Mare ponies brought $45-110 and geldings were $30-75. Mules by the pair brought $300-500; riding horses $110-225, and driving horses $110-265. Killers were 7 to 7½ cents.

At the Feb. 18 hog sale 512 head sold on a steady to weak market. Retail hogs to local butchers brought 17 to 18 while number 1-3 to the packers were 16-17. Heavy fat hogs over 240 pounds brought 15-16.

The 89 calves at the Feb. 18 sale sold steady.

Choice and prime were 36-42; good and low choice 33-36; standard 26-33, and common were 18-26.

Utility and commercial cows 14.25-16 50. Canner and cutter 12 00-14.25. Utility and commercial bulls 18 00-20 00.

Sheep - 800. Rather slow Slaughter lambs steady to weak; slaughter ewes steady. Couple loads 90-180 pound choice wooled slaughter lambs 19 including deck of 108 lb ted westerns Good and choice 80-100 pounds 17 50-18 50

Hogs, 6,000 fairly active. Butchers uneven about steady. Sows steady One and two grade 190-220 pound butchers 15 50-16 00 One-three 190-225 pound 15-15 75. 220-260 pounds 14 75-15 50 Two-three 250-290 pounds 14 25-14 75.

Sheet Supply

Six sheets for each bed in the house isa satisfactory supply, says Mrs. Cecile P. Sinden, Penn State home management extension specialist This allows for two sheets in use, two in the laundry, and two on reserve Three sheets for each bed is a minimum. Buying two sheets a year for each bed keeps the supply plentiful.

MORE FOR YOUR MONEY!

Here's why. The Wayne Tail Curler feeding program gets pigs off to a fast, healthy start —provides the proper nutrition at every stage of the life cycle. Real feed efficiency gives you low cost pork production. Read what other Wayne feeders say: **J. L. Manoe**, Xenia, O.: "218 lb. pigs in 5 months, 4 days. Feed cost, $9.46 per cwt. gain." **Mike Bothell**, Iowa City, Iowa; "Feed cost, $7.51 per cwt. pork, 2.41 feed conversion."

Get your hogs on the Tail Curler program. We have Wayne Calf and Pullet programs too!

Prices Down One Cent

Volume was about steady but prices slumped slightly more than a cent a pound on live broilers at the February 21 auction at the Lancaster Poultry Center.

A total of 82,575 broilers in 17 lots sold at prices of 16.2 to 17.2 for an average of 16. 93 compared to the 18 05 at the previous week's sale.

Three lots of 1,894 heavy fowl brought 21 to 21.5 and one lot of 450 pullets sold for 25 1. All birds on offer were sold. A total of 85,045 head in 21 lots were offered and sold.

The top lot of broilers was 7,000 White Vantress at 9 weeks 2 days consigned by D. E. Horn and Company, Richard E. Myers, grower, and purchased by Carl B. Risser.

At the corresponding sale last year 14 lots containing 58,800 broilers sold at prices ranging 18.7 to 21 5 for a sale average of 19 09.

Following is the complete February 21 sale report with lot number, seller, grower in parenthesis, amount and breed, age is weeks asd days, buyer and price.

Holiday Shortens Market Report

Because of a holiday on Friday, a complete sale report from Delmarva was not available

Wednesday's sale at the Eastern Shore Poultry Grower's Exchange offered 532,132 head and sold 494,100 head of broilers at prices of 15 5 to 17 6 for an average of 16.57.

At the Thursday auction in Selbyville, Del. broilers averaged 16 54

The Delmarva broiler-feed ratio for the week ending Feb. 15 was up one point to 3 5. Broilers averaged 17.20 and mash cost the grower $99.06 per ton.

The ratio for the comparable week a year ago was 3.7 when broilers averaged 17 32 and 20 per cent mash cost the grower $93 68 per ton.

Watch your driving when you pass by the scene of an accident, the Safety Crusade warns Stopping suddenly or crawling along to gape only adds to the conflict, especially on high speed roads.

From Where We Stand . . .
Milk Is Not Medicine

Milk is good. Let's leave it that way.

In a news story that came across our desk this week, the writer said, "Milk from properly treated cows can be useful in preventing and treating certain human diseases."

He explained how milk from cows injected with antigens or germs of human diseases can be used in treating certain arthritis and hay fever cases. When the substances are injected into the milk producing glands of the cows, the organisms cause a buildup of immunities to the disease in the cows' milk.

If enough of the milk is consumed by the affected person, the disease fighting organisms are picked up in the blood stream and fight off the disease, the story went on.

Now, we believe that every tool at our command should be used in the fight against disease, we just hate to see the scientists fooling around with a wholesome food like milk.

Most children, fortunately, just naturally like milk. We would like to see it continue that way.

Most children instinctively dislike medicine We would not like for a mother to have to say to a child, "Now drink your medicine," when she pours a brimming glassful of delicious, nutritious milk.

If a new medicine is developed, and it is proven effective, let's use it by all means, but let's call it medicine. Let's keep milk the good, wholesome, delicious drink it has always been.

We ought to begin telling the mothers of this country that milk is good — not just good for you.

At least that's how it looks from where we stand.

Heralds Of Spring

As we look out the window this morning, the flakes are again falling. It has been a long, hard winter. One of the most often heard complaints recently is, "Won't winter ever be over?"

But in the mail came a sure sign of spring.

The annual seed catalogs again sport magnificent color pictures of fruits and vegetables big and perfect enough to gladden the heart of the most avid gardener. The pictures carry a promise of spring and summer and harvest time, much more surely than the groundhog, or robins, or crocus, or any of the other more widely acclaimed harbingers of Spring.

They set the heart of the gardener to singing and his hands itching to be in the warm, brown earth of the garden as nothing else can do. (except, possibly, the fresh-turned soil of the garden itself).

The catalogs, with their bright red tomatoes, dark red beets, verdant green and creamy white beans, golden yellow sweet corn, and rich green cucumbers, kindle a desire for warm weather and growing things that has lain dormant all through the dark, dreary days of winter.

We have to put a tight check rein on our emotions to keep from ordering a big packet of every seed described in the glowing terms the ad writers reserve for their most special items.

So, while it looks like anything but spring outside today, we know the seed catalogs can't be wrong. Spring will come.

Spring came last year, and the year before that, and the year before that . . and as long as this earth lasts, Spring will come on forever.

At least that's how it looks from where we stand.

★ ★ ★ ★

Startling Statistics — Someone has tabulated that we have put 35 million laws on the books trying to enforce the Ten Commandments.

★ ★ ★ ★

A Lot of Milk Vendors — Consumption of milk should be increased through the operation of vending machines. A Bureau of the Census study reveals a total of 5,176 vendors valued at $4 million were shipped by manufacturers in 1961.

★ ★ ★ ★

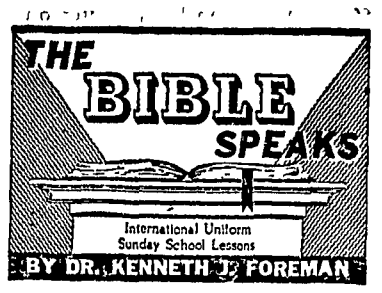
Big Insect Appetites — Insects attacking our farms and forests cause losses estimated at from $10 Billion to $15 Billion a year. It is expected that new chemicals may ultimately reduce a very large part of these losses.

★ ★ ★ ★

Fluoridated Milk Benefits — Children's dental cavities have been reduced as much as 75 percent through use of Fluoridated milk, according to a Louisiana State University study. Researchers say fluoride combines with calcium to help bond enamel to growing teeth and dairies eagerly await a Federal okay to use it. They figure demand would be particularly keen in areas where water supplies aren't fluoridated.

★ ★ ★ ★

Youth Moving Out — The Agriculture Department reports that rural young people are moving to the cities so fast that the farm population is now declining due to the shortage of potential young parents. In some rural counties the number of births occurring has recently fallen below the number of deaths.



Christian Credo

Lesson for February 24, 1963

Bible Material: Mark 8 27 through 9 1
Devotional Reading: Philippians 1:12-21.

THE word "Credo" comes from the Latin and it means "I believe." Most Christian churches repeat the "Creed" during the Sunday worship But a person might know the Creed by heart and still not really believe it Some Christians fly on the wings of others, so to speak. They expect to "go to heaven on their grandmother's ticket." They expect to get credit for what Grandmother believed. It can't be done.

Dr. Foreman

Some churches have no creed but the Bible. They feel that nobody understands a creed anyhow, and that creeds are the language of men not of God. As a matter of fact, all Christian creeds are based on the Bible, and it is a striking fact that they are all much alike, and often in the exact words of the Bible. If a man believes just one single thing, he has that much of a creed.

Believing what we cannot see

Let us look at another word: Science. That comes from another Latin word, meaning "I know." What is the difference between a Credo and science? What is the difference between a Creed and knowledge? One difference is this: If I say "I know" something, and I do know it, then I can prove it to anybody who is not blind or crazy. But if I say "I believe" something, I can be just as sure about it as if I "knew" it, and it can be just as true. Only, what I believe is not public knowledge, shared by everybody. It is private and personal. It goes beyond what any fool can plainly see.

The most important truths in life are precisely those that cannot be proved, but must be believed. When a girl promises to love and to cherish a young man, how does he, how does any one know she is telling the truth? It is the most important thing in his life; but he must live by it, not prove it. We believe that God is love; but not every one knows that, though everybody knows the sky is blue. You can know that God is love not by having some one prove it to you; you have to live by faith that it is true.

The first Christian creed

The first Christian creed was probably the shortest. Jesus asked His closest friends: Who do men say that I am? Peter's answer is reported by Mark as a very short one: **You are the Christ!** With that single sentence Peter registered his belief about Jesus and his belief in Jesus. From that day to this, Christ has held the central place. There may be all kinds of churches, but one kind you will never see is one where the people won't say whether they believe in Christ or not. Any "Christian" who hasn't made up his mind about Jesus is hardly ready to be called a Christian.

Mind you, Peter did not say all the things, he did not use all the words, about Jesus that the church would one day use. But in that simple declaration, **You are the Christ,** was packed something vitally important. For one thing, Peter places Jesus in a class by Himself. No Jew in those days thought there could be more than one Christ (or Messiah—the two titles mean the same). Further, Peter meant to say that Jesus was the Number One Authority over men. To be Christ means to share the sovereignty of God Himself. How could Peter know this was true? he never tried to prove it, but he dared to live by it.

Call to all, call for all

There is a very important feature of Christian faith, at its center and heart. That is, genuine Christian faith is much more than reciting a list of what you believe. More important than belief-about is belief-in. There is a poem called "Not What but Whom I do Believe"; it speaks for Christians everywhere, it declares faith in a Person not in a Proposition.

There are millions of things one can know or believe, without being changed at all. A man who believes oatmeal is good for him is just about the same man if he changes his mind and concludes that oatmeal is bad for him. But if a man believes that God is good, if he goes on and is not changed by that belief, he doesn't really believe it. Christian belief challenges all men, calls to all; and true Christian belief calls on a man for all that is within him.

Now Is The Time . . .

BY MAX SMITH

MAX M. SMITH

To Give Lambs Extra Care

Lambing time is one of the most important times in the sheep production year. Sheep producers should make a determined effort to raise every lamb that is born. Be on hand when the lamb is born, keep it warm, get it to nurse as soon as possible are all practices that will get the new-born off to a good start. During cold weather heat lamps should be used to keep the pen warm and dry.

To Test Held-Over Seed

Some farmers and gardners may have some seed left from the 1962 season; if the seeds have been stored in a cool, dry place, no doubt they will grow The safe procedure is to run a germination test on a small amount of the seed and count the percentage that sprouts. A flat containing moist soil or sand, or two blotters, or rolling seeds in a moist cloth will serve as methods to run the test. Don't take chances; either test old seed or buy new seed.

To Plan For Better Grass Silage

In a few months the new hay crop will be approaching harvest; some livestock men will continue to make part of their first hay crop into grass silage; this is good insurance against drouth next summer. The practice of direct-cutting into the silo continues to produce a poor, low-quality silage and should be dis-continued. Wilting for several hours after mowing and before ensiling is

operators are urged to adapt their machinery to this wilting method.

To Keep Cows Well Bedded

In spite of the bedding shortage dairymen should make a special effort to keep some litter under the udders of the milking herd Bare concrete has the ability to cause numerous udder problems and should be kept covered at all times. If straw is not available, then shredded corn fodder, sawdust, shavings, or peanut shells may

(Continued from Page 1)

two year terms, were won by Frank K. Book, Leola; Clair M. Hershey, Willow Street R2; Frank L. Hershey, Willow Rd.; Jacob Houser Jr., Lampeter, and Jay E. Landis, Lancaster R6.

Elected to sire reporting committees for one-year terms were: J. Earl Ranck, Gordonville R1, Ayrshire; Melvin R. Stolzfus, Ronks R1, Guernsey, Roy Book, Ronks R1, Holstein, and Robert Ulrich, Quarryville R1, Jersey.

In a panel discussion on the efficiency of milk production, Mrs. Raymond F. Witmer, Willow Street R1, stressed good size and established cow family in raising calves.

Arthur Wenger, Manheim R2, suggested drying off cows by reducing milking to once a day rather than taking away feed to cut production.

"If you take away feed the calf must get nourishment from the cow's flesh," Wenger said.

Wenger, commenting on his dumping station, said it has saved labor and fits into a long range plan he developed when he installed a bulk tank.

Robert Ulrich, discussing a feeding program, said he feeds two pounds of grain for each 100 pounds of body weight after a cow freshens until she reaches peak production. After that, Ulrich said, he feeds at a level to maintain that output.

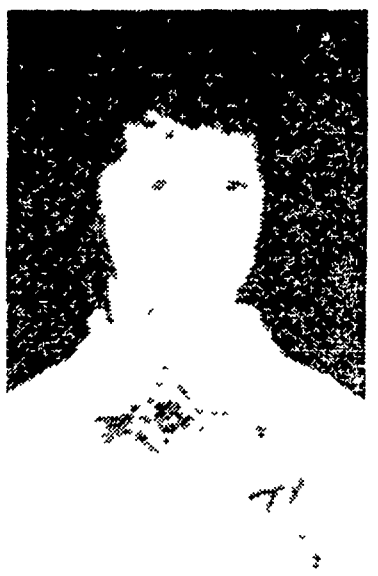
Keep your distance, the Safety Crusade suggests. You can never react as fast as the driver you're following.

Youthpower Contestant Writes Health Tips For Athletic Teams

By Mary Jane Herr

Ed Note: The following article was written by Mary Jane Herr, a 4-H member from Refton, as part of a project in a "Youthpower" contest.

Imagine yourself the coach of your high school football team What would you tell your team about nutrition and good eating habits as they relate to staying in (or getting in) good condition?



MARY JANE HERR

During high school I am happy to say I was captain of the girls varsity hockey team and these health rules should apply to football teams as well. I had the responsibility of seeing that the girls and myself were in good physical condition for the games.

A boy who wants to play on the team should watch what he eats and get plenty of sleep. To become a better athlete he should cut down on the fatty foods and at foods that provide plenty of body building nutrients.

He should eat a high protein diet with plenty of carbohydrates, because carbohydrates help supply energy for work and play Before a game he should never eat heavy or starchy, fatty food To some people one small candy bar supplies the extra energy they need Between half time allow the players to eat oranges and lemons rather than drink water. Water doesn't always satisfy your thirst, but by eating the fruit, you will give your body energy as well as satisfy your thirst.

Diet isn't everything in sports, keeping yourself in good physical fitness is another Before games or practices have the players run around the football field several times and then do exercises Running in place, touching toes and push ups are all very good exercises Certainly it's tiresome at first, but it just shows he isn't in good physical condition. If you want to win you must do all these exercises to get your muscles limbered

Plenty of sleep is essential, especially the night before a game To some people too much exercise is bad, but not enough sleep is worse A person who had plenty of rest is ready to get out in the field and really do his best for the team

Smoking seems to be a habit with most boys today, and it should be discontinued during sports season On my team it was play and not smoke or smoke and not play.

Things to tell your team when coaching should be — eat a proper diet, get enough sleep every night, plenty of exercise, follow good health habit of cleanliness and show good sportsmanship through out the whole game.

Slipcover Fabrics

Buy colorfast fabrics for slipcovers especially if they will be subjected to strong sunlight, advise Penn State extension home management specialist. Sunlight may affect yellows although they are marked colorfast Read labels for information about the fabric Many fabrics have labels on the bolt; some also have information printed on the selvages

● DHIA Tester

(Continued from Page 1)

the farmer has. If he expects them to do him any good he has to make use of them."

Risser checked his scales to make sure they registered "zero", and by the time the first milker pail was full, he was ready with his 20-quart bucket.

He weighed the milk from the first cow, entered the weight on his charts and then stirred the milk thoroughly before dipping his sample. Accurate sampling is just as important as accurate testing Risser believes. "You can make an accurate butterfat test, but if you don't have a representative sample, you won't get a true picture." he said.

The sample went into a numbered bottle and Risser carried the milk to the bulk tank in the milk house.

By the time he returned, another milker pail was ready and the process was repeated. He had little time to loiter between cows, but he worked carefully and accurately.

By shortly after 7 o'clock the 28 Holsteins were milked and the sample box closed. Risser took the samples home where he would store them in a cool well pit overnight to keep them from spoiling. He also took the Landis Herd book along with him to enter the permanent records which would be returned to the farmer next morning.

At 5 30 a.m. next morning we were in the barn again where much the same routine took place, except, this time he presented the bill and collected a check before leaving.

Conversation in the barn ranged over a wide scope, but centered mainly around dairying and milk testing. Risser recounted some of his experiences as a tester for two years in Washington and in Lancaster County for the past eight years He has been head tester in the Red Rose DHIA for the past two years. Since Landis was formerly a cow tester, he had shared many of the same experiences of living with farm families, and they entertained me quite well with amusing accounts of their early days in testing.

Risser took the sample bottle wife-to-be in a church in Washington County while he was testing there. Her father was a dairyman, but his farm was not in Risser's area.

We stopped on the way home to pick up a tray of samples from the farm of Jacob Hess, a neighbor of Landis, who is on the Owner-Sampler program. Hess weighs and samples his own milk and keeps his own feed records Risser tests the samples and figures the individual cow's record just as he does for the regular DHIA patrons The Owner-Sampler records are not official, but they are a good guide for the farmer who wants a record for his own use. Risser has almost 30 of these herds under test at present.

After a delicious breakfast of eggs and sausage with the Rissers, I was introduced to the real job of the DHIA supervisor. In the basement of his comfortable home, Risser has set up a laboratory where he "runs" the samples.

Riser took the sample bottle numbered "one" and agitated it thoroughly to make sure the cream was well mixed with the milk. He poured it back and forth in two clean sample bottles to complete the mixing and drew exactly 17 5 cubic centimeters into a pipette, and then transferred it to the thin-necked test bottle. After all the 56 samples had been pipetted into the test bottles, he added a like amount of sulfuric acid to the milk samples and shook the trays to mix the acid and milk. The samples turned a rich coffee color as the acid digested the protein and other solids-not-fat The digestion made the test bottles so warm that they could not be held in the hand.

Twenty four of the samples went into the centrifuge at one time The centrifuge is a machine that spins the bottles at a high rate of speed to push the heavy acid and digested milk solids to the bottom of the bottel and bring the dissolved butterfat to the top. After five minutes in the centrifuge, each bottle got enough hot water to bring the level of the sample to the bottom of the neck. After another two minutes of spinning the bottles were filled with enough hot water to bring the entire fat content into the neck of the bottle.

Another minute of centrifuging, and the samples were ready for a hot water bath. Butterfat expands and contracts with temperature changes, so in order to get an accurate reading, Risser keeps the samples in the hot water bath for five minutes With the aid of a pair of wing dividers, he measures the height of the fat column in the neck of the test bottle and reads the butterfat percentage directly from the graduations on the bottle neck

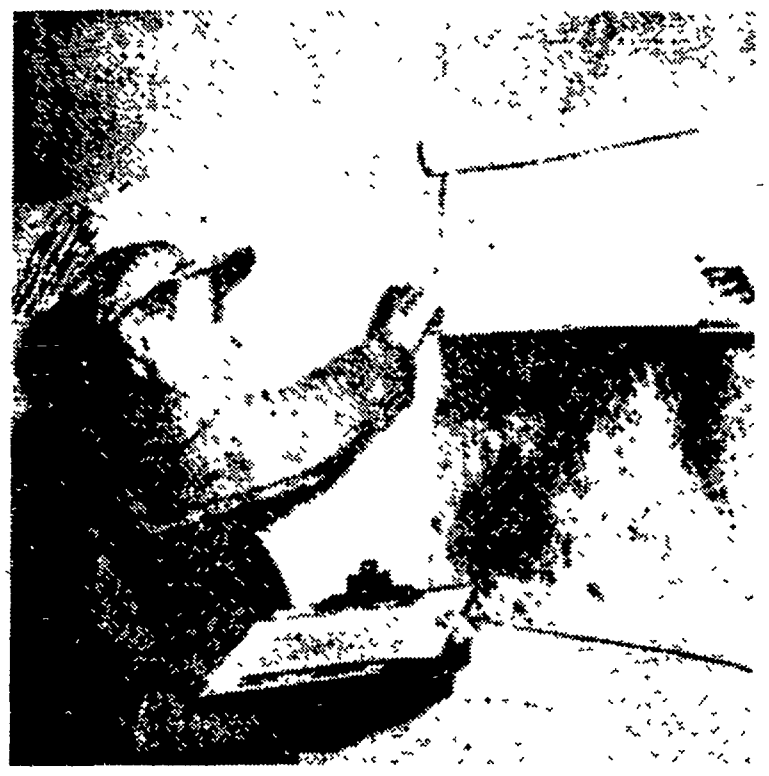
After all the tests had been entered on the record sheets, Risser emptied the test and sample bottles and thoroughly washed all glassware. He made sure all bottles were turned upside down for thorough drying

By this time it was past mid morning and the daily report to be sent to Penn State for electronic processing had still to be completed While Jay completed the "IBM" sheets for mailing, his wife, Lois Ann, worked on the monthly news letter of completed lactations over 350 pounds and the monthly herd averages over 35 pounds which is sent to all members of the association.

By noon, all the paper work was completed and after call-

(continued on page 7)

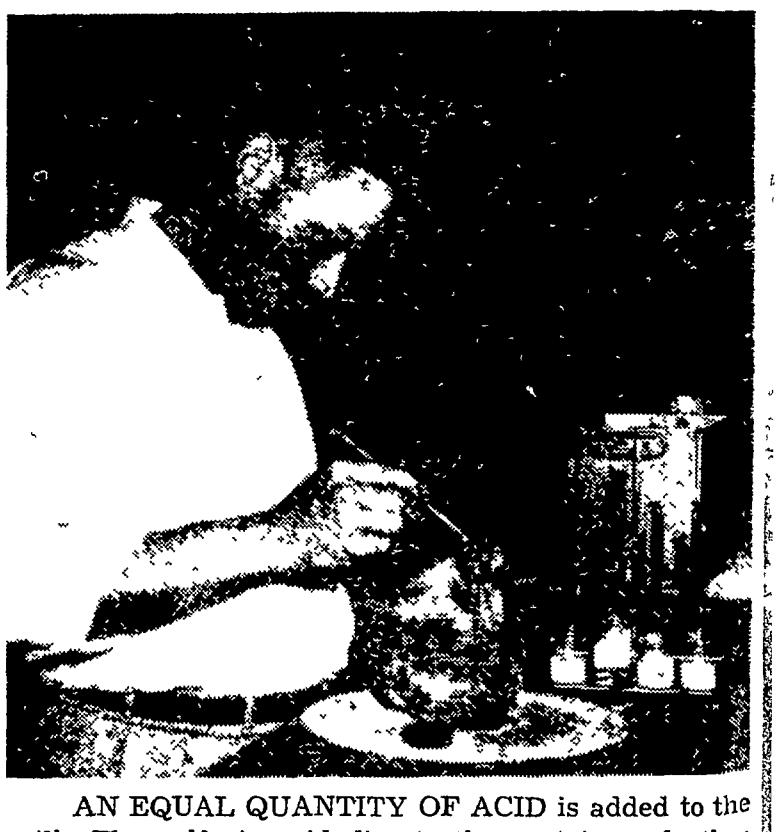
AFTER THE MILK HAS BEEN sampled, Risser carries it to the milk house and pours it into the bulk tank. Here at the farm of Jay Landis, Lancaster R6, he strains milk from one cow while Landis milks another. L. F. Photo.



THE FIRST THING JAY RISSER does when he arrives at a farm to collect milk samples is to get freshening, breeding, and dry dates on each of the cows from the farmer's barn charts. He transfers this information to the record which he sends to Penn State. It then becomes part of the permanent record on the herd. L. F. Photo.

CAREFUL MEASURING OF THE TEST SAMPLE assures an accurate butterfat test. Here Risser draws 17.5 cubic centimeters of milk into a pipette for transfer from the sample bottle to the test bottle. Milk must be kept from souring until the test is completed. L. F. Photo.

ACCURATE SAMPLING IS JUST AS important as accurate testing, Risser believes. He stirs the milk well in the pail before collecting a dipper full. If the milking hours vary from morning to night, he takes a larger sample from the larger milking. L. F. Photo.



AN EQUAL QUANTITY OF ACID is added to the milk. The sulfuric acid digests the protein and other solids-not-fat, leaving the butterfat to rise in the neck of the test bottle after a spin in a high speed centrifuge. L. F. Photo.

WITH THE HELP OF A set of wing dividers, Risser measures the height of the fat column in the neck of the test bottle. Since temperature effects the volume of fat, the test bottle and its contents are put in a hot water bath for five minutes to assure an accurate reading. L. F. Photo.

● DHIA Tester

(Continued from Page 6)

ing his next herd owner Jay could relax for a short while before his "day" would begin again.

With 30 herds on official DHIA test and almost as many on Owner-Sampler, a day off is a rarity, but once in a while, Mrs Risser pitches in and helps with the sampling so that two herds can be sampled in one day This is a necessity in a short month such as February, but Jay says he enjoys the work. He especially enjoys getting on to the farms of the county and talking with different farmers. The only restrict-

Red Rose Degree Is Conferred

A total of 43 Red Rose Farmer degrees were conferred by the Lancaster County Association of Future Farmers of America at a meeting in the New Holland High School Monions on the hours he works is the milking time of the farmer and the "centering date" of the herds he tests All sampling must be done within three days before or three days after the centering date each month. The farmer knows his centering date, but he does not know until noon which day the tester will call at his farm.

I said goodby to five-year-old Ronald and two-year-old Mary Ellen (Carol Ann was in school), and went on my way thinking, "Here is another graduate of the Vocational Agriculture program in high school who has made good in a business related to farming"

This, too, is agriculture. I thought.
day night.

The degree, the highest that can be awarded by the county chapter, was conferred on students from nine county high school FFA chapters by the officers of the county association.

The boys were screened by a committee of county officers and advisors at a meeting in November, but the ceremonies to confer the degrees were not held until this week.

The degree is considered a "stepping stone" between the chapter Farmer degree in the farm boy organization and the coveted Keystone Farmer degree which is conferred on only two per cent of the active state membership.

Following are the successful candidates for the degree.

Grasslands FFA (Garden Spot High School, New Holland) — James Martin, Walter Musser, James K. Sensenig, John C. Campbell, Clyde B. Wissler, Roy W. Musser, William J. Shirk, Richard R. Martin, Leon D. Weaver, Robert Mohler and Kenneth M. Martin.

Manheim FFA (Manheim Central High School) — L. Raymond Myers, John Wagner, Clarence Hotter, Gerald B. Waltz, Carl Fahnestock, Clair Bruckhart, John G Myer and Robert Kopp

Manor FFA (Penn Manor High School) — Robert Haverstick, Jay L. Mylin, Raymond Souders, Jerry Breneman, William L Sheitzer and Glen B. Shultz.

Elizabethtown FFA (Elizabethtown Area High School) — Donald Miller, J Richard Snavely, Jacob Long and Ronald W. Gantz

Cloister FFA (Ephrata Union High School) — Martin Wenrich, Ray A Kline, Larry Fetter and Kenneth E. Spade.

Pequea Valley FFA (Pequea Valley High School), — Glenn Esbenshade, Donald Ranck and Frank R. Yost.

Solanco FFA (Solanco Senior High School) — Virgil R. Wimer, Robert Wolgemuth and William A. Wilson Jr.

Warwick FFA (Warwick Union High School) — James L. Boll and Ricky Lee Fritz

Garden Spot FFA (Lampeter-Strasburg High School) — Jay C. Herr and Stanley Graver.

Local Girls Win Contest

Winners from high schools in this area in the 1963 Betty Crocker Search for the American Homemaker of Tomorrow have been announced.

Each girl was first in her school in the knowledge and attitude test given senior girls Dec 4 and thus becomes eligible for one of 102 scholarships with a total value of $110,000.

Papers of the winners have been placed in competition with those of other state high school winners for state-wide honors.

The State Homemaker of Tomorrow will be named in the spring. She will receive a $1,500 scholarship from the sponsor of the program. A $500 award will be made to the second highest ranking Homemaker of Tomorrow in the state. The school of each state winner will receive a set of Encyclopedia Britannica.

Later, State Homemakers of Tomorrow with their advisors will enjoy an expense-paid educational tour of New York City, Washington, D C and Colonial Williamsburg, Va., which will culminate with the naming of the 1963 All-American Homemaker of Tomorrow.

The national winner's scholarship will be raised to $5,000, with second, third and fourth place winners being granted $4,000, $3,000 and $2,000 scholarships, respectively.

The winners in the various schools in the area, together with their schools are as follows

Cheryl Ann Sweigart, Conestoga Valley Senior High School, Judith A Coleman, J P McCaskey High School; Mary Ellen Gardner, Lancaster Catholic High School, Jennie E Hansen, Elizabethtown Area High School, Elizabethtown; Karen A Gravenor, Ephrata High School, Ephrata Diana L Denenberg, Manheim Central High School Manheim; Nancy Jane Wilcox, Manheim Township Senior High School, Neffsville; Betsy Jo Sinclair, Solanco High School, Quarryville, Sandra L. Garber, Hempfield Senior High School, Landisville.

Corn Clinic At New Holland

"Today's Answer to Yesterday's Problems," was the topic of discussion at the Garden Spot Young Adult Farmers' meeting last Tuesday evening.

Mr. Phillip Koch, Area Fieldman for Geigy Agricultural Chemicals, discussed the chemical weed control in corn production He stated that effective weed control is one of the most essential needs of every farmer who grows corn Here are some questions that were answered. How has modern chemical weed control been accepted among the farmers who produce top yields? How do they use herbicides on their own farms? What are the benefits? Why is effective chemical weed control so important for improving efficiency and profit in corn production

It was stated that some of the newer herbicides used to control weed in rows with an application at planting, before weeds are up Another practice widely used is an application after planting, any time before weeds are 1½ in high.

Weed killers can be sprayed the day after planting or at any time before weeds and grasses are 1½ in high The herbicide is absorbed by weed seedlings through foliage and roots.

Koch stated that good weed control is largely dependent upon these conditions: 1 Proper rate of application according to soil type; 2. Uniform distribution on soil surface, 3. Proper calibration of equipment at recommended rates, 4. Adequate moisture is needed to move herbicide into soil where it can be absorbed by weed roots; 5 For granules, good seedbed preparation that is smooth and compact, free of clods, is especially important.

Special treatment for perennial weeds is needed for effective weed control. Koch suggested the following treatment:

1. Make first broadcast applications to quackgrass in the spring, three weeks before plowing.

2 After planting corn make a second application for control of annual broadleaf weeds and grasses and to finish off any persistent quackgrass.

It was recommended that corn should follow corn when these special treatments of higher-than normal dosage rates are used.

Maximum sunlight provides conditions for faster weed killing and warm temperatures result in faster weed growth and more rapid absorption of herbicide by the weed Rain is necessary to move the herbicide into the weed root zone. Adequate moisture at the time of planting or shortly afterwards, dissolves the herbicide and disperses it rapidly through the soil making it readily available for absorption by weed roots Under high soil moisture conditions, weeds tend to germinate nearer the surface where they are easily killed.

In a dry spring, the farmer must cultivate as soon as weeds appear to move the chemical into the root zone. **Rates of application, said Mr. Koch, should be carefully followed from the label directions.**

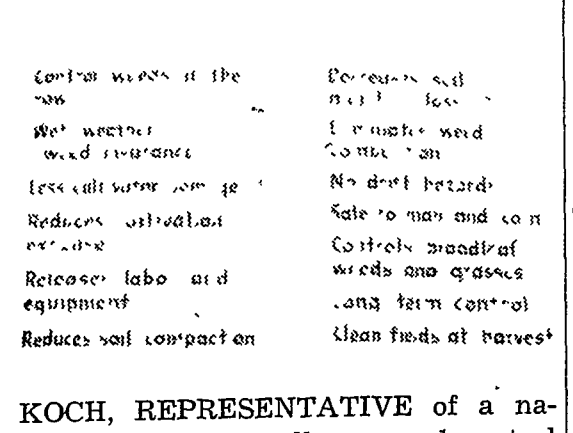
Because some chemicals remain in the soil to work for you all season long, observes these four simples rules:

1. Do not use more herbicide than is recommended for your soil type.

2. To minimize possible injury to wheat or barley, plow or work the soil well.

3 Corn should follow corn when higher-than normal dosage rates are used

4 Do not follow treated corn with sugar beets or vegetables in rotation.



PHILLIP KOCH, REPRESENTATIVE of a national chemical firm presented a talk on weed control in corn at a meeting of the New Holland Young Farmers this week in the New Holland High School. Koch illustrated his talk with a series of charts outlining proper application of herbicides.

● Soils Day

ternoon session Eakin will speak on "Nitrogen — a Key Element"

Lancaster County's winner in the Southeast District hay show last summer will discuss "How We Do It" for quality hay awards. Discussion will center around the production methods of Galen Crouse, Stevens R1; Mahlon Shenk, Holtwood R2, and Harold Weitzel, Ephrata R1.

The meeting will be sponsored by the Lancaster County Extension Service Lunch will be available Adjournment is scheduled for 3 p m.

Never try to "make the light," advises the Safety Crusade Enter the intersection only if there is enough time and room to clear it completely before the light changes.

Cocalico Herd Has High Record

The Ayrshire Breeders' Association of Brandon, Vt , has announced the completion of an official herd lactation average for the herd of Cocalico Farm, Stevens, Pa.

This herd of registered Ayrshires completed its 17th year on official Ayrshire herd test with 28 lactation records averaging 11,606 pounds of milk, testing 4 per cent and having 470 pounds of butterfat

The high individual cow in the herd for milk was Cocalico Signet's Viola with 13,810 pounds in 305 days and on just twice a day milking. The high cow for butterfat was Cocalico Preferred Lass with 572 pounds

CHECKERBOARD service bulletin

How to Save $15 or $20 per Hundred Pullets

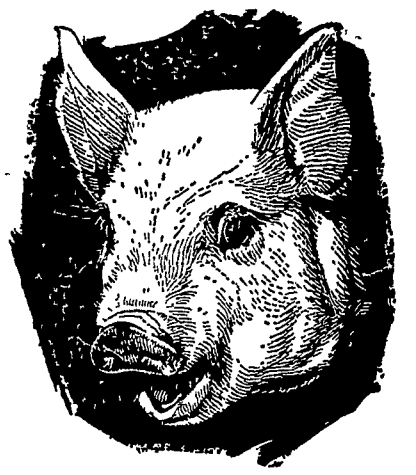
Do you know that you may save as much as $15 or $20 on every hundred pullets you raise this year? You do it by following the Purina Controlled Pullet Growing Plan.

After pullets have reached ten weeks of age, you simply limit their feed to 80% of what they would consume on full feeding. The correct amount has been worked out by Purina Research, and it's easy to follow. Best of all, Purina Controlled Feeding Plan helps you grow pullets that lay more large eggs . . . fewer small ones and pee wees.

Visit our store and let us explain this cost-cutting plan. Besides Purina Growing Chows, we also have a full line of Purina Health Aids, and, of course, our friendly service is always available.

Call us or drop in. Prove to yourself - Purina feeding cost you less.

10 years of Purina Research behind New Purina Early Weaning Chow



Purina Early Weaning Chow for baby pigs is a highly palatable, highly fortified, highly nutritious feed made for hogmen who plan to wean pigs at three weeks . . . or wish to wean pigs earlier. It may also be used in early weaning of late-farrowed litters, for orphan pigs or undersize pigs at normal weaning age.

IN SIX TESTS ON 616 PIGS, Early Weaning Chow-fed pigs gained as fast as pigs on sow's milk and creep feed from the 3rd to 6th week. They gained .77 lb. per pig daily — made 1 lb. gain from only 1.27 lbs. feed.

IN ON-THE-FARM TESTS, pigs followed the same pattern . . . weighed 23-33 lbs. at 6 weeks. Feed cost per pound of gain on good pigs, raised under good management, ranged from 12c to 14c.

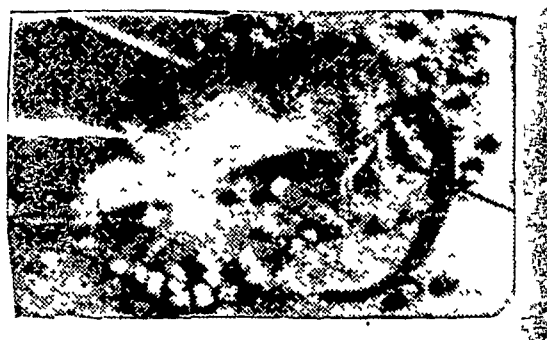
KILL RATS... Use Purina Rat-Kill

Purina Rat-Kill is an entirely different kind of killer for rats and mice. It's a "carry-home" bait. Rats haul it back to the nest . . distribute it themselves . . . feed Rat-Kill to the whole family till they're dead.

Rat-Kill has these extra advantages:

- **Highly palatable and bulky**
- **Kills fast in 5 to 15 days**
- **Low priced**

See us for Purina Rat-Kill right away. We're at the Red and White Checkerboard Store in town.



Here's what happens to rats that eat Purina Rat-Kill. They're dead in 5 to 15 days. Rats love Rat-Kill. It's effective and economical, too.

Co. Feed Firm Adds Personnel

Francis X Campbell will join the sales and service department of the Rohrerstown feed firm of Miller and Bushong, Inc on March 1.

After serving in the U S Navy, Campbell attended the

FRANCIS X. CAMPBELL

Stockbridge school of the University of Mass and graduated with a degree in Animal Husbandry in 1955 He has had experience in dairy and livestock service supervision and management having been successively herdsman and farm manager on prominent New England farms.

More recently Frank has been active in the servicing of dairy and livestock accounts in the Lancaster area for a New England feed firm

Frank and his wife Beatrice and three-month-old son reside at 1727 Bill View Drive, Lancaster.

Farmers Cooperative Changes By-Laws At Annual Meeting

SPRINGFIELD, MASS , February 20 — By amending its bylaws to adapt them to new regulations established by Congress in the Internal Revenue Act of 1962, Eastern States Farmers' Exchange, Incorporated, will no longer pay cooperative refunds on its sales to nonfarmer patrons, W. D. Milsop, general manager, announced at the close of the organization's annual meeting today.

Prior to the bylaw changes voted in today's meeting, Eastern States operated its supply purchasing service for farmers and its sales of lawn, garden and household items to urban patrons on the same cooperative basis — namely, it kept a record of every purchase and refunded part of its savings to patrons in proportion to their purchases. The balance of savings not refunded was retained for capital purposes, but credited to patrons in proportion to their purchases. Inasmuch as both the refunds and retains thus became the property of the patrons, the cooperative itself was exempt from income tax on these sums.

Milsop explained that the Internal Revenue Act of 1962 and the amendments of its bylaws now make it possible for Eastern States to operate its nonfarmer business as a profit-making enterprise that benefits the cooperative's members, the farmers who own Eastern States. Milsop said that this means the Eastern States will pay income taxes on its nonfarmer business and its profit after taxes will be retained for capital purposes and that this will reduce the amount of capital farmers will need to furnish for the growth and development of the services they want their cooperative to provide.

Exchange business for 1962 amounted to $97,642,923, up 3 7 percent from the previous year, Milsop reported to the 45th annual meeting. Gains were made in both the Purchasing and Marketing Divisions of the organization, he told members

Mildred E. Pike, treasurer, reported that savings for 1962 were $2,813,354. Out of this amount, $993,500 will be retained for capital and the remaining $1,813,854 will be paid to patrons in the form of a cash refund.

Patrons (farmer-members and nonfarmers) purchased $86,914,125 worth of goods through the cooperative, and products marketed for patrons — chiefly table eggs and grain — amounted to $10,728,798. More than 21,813,043 dozens of eggs were marketed through six plants, an increase of 427,491 dozens over 1961. Approximately 15 million dozens, 70 percent of the total, were cartoned for retail trade. Total volume of grain, produced in the Middle Atlantic area, amounted to $1,890,450. This represents the sale of 1,140,373 bushels, a 12.8 percent increase over the previous year's volume.

● Poultry Outlook

(continued from page 1)

weeks.

The increase in weekly placements as compared with the previous year was during the period when production normally is lowest Even though at times placements were 20 per cent ahead of the corresponding week or weeks of the year previous, production was still below the peak weeks of 1962.

Later in the year supplies may be about the same as a year ago Some estimate there will be 3-4 per cent more broilers produced in 1963 than in 1962

Demand for broilers is expected to be strong Relatively high retail meat prices, strong export demand, fewer turkeys and a reduced rate of expansion contributed to more favorable prices throughout much of 1962 These factors are not expected to exert the strength they did last year Prices for red meat will be a little lower exports are expected to be lower than in 1962 and there will be more turkeys In spite of these, demand is expected to be strong because of increases in population and higher consumer income

● Swine Producers

(Continued from Page 1)

quality of the meat-type hogs a carcass demonstration and evaluation will be held for the participants at the Kunzler & Co packing house On rail evaluations will be made by Penna State University livestock specialists

The show will start at 8 30 a m and continue throughout the morning The sale of all hogs will start at 2 00 p m

Hog raisers, whether participants or not, are invited to attend this show It is set primarily as an educational institute with the best of area hog producers participating

Be a Better Shopper

Holstein Ass'n Adds Members

BRATTLEBORO, VERMONT — Pennsylvania accounted for 104 of 663 new and renewal members announced today by The Holstein-Friesian Association of America.

The Keystone State total ranked second only to New York's 108 Wisconsin in third place among the 45 states represented, had 78

The Association maintains all official records of Registered Holstein-Friesian cattle in this country at its national headquarters here.

Total membership, as a result of the 663 new additions, is currently at nearly 41,000 There are also more than 12,800 active Junior Members.

Business volume includes the registration of more than a quarter-million new animals and more than half as many officially-recorded transfers of ownership each year.

More than 130,000 Registered Holstein cows are currently enrolled in three production testing programs which the organization conducts in cooperation with the various state agricultural colleges. Nearly 3,200 herds in 49 states are represented.

In addition, nearly 65,000 cattle of the breed are officially classified for type, or body conformation, by Association representatives each year.

Following is a list of new members in the association from the Lancaster area

Jacob R. Houser, Jr., Lampeter; Paul K. Brubaker, Manheim; Daniel Lewis Esh, Intercourse; David G. Miller, Manheim; Park L. Buckwalter, Jr., Oxford; Burton Y. Staman, Columbia, Wilmer G. Kraybill, Elverson; Harold M. Barley, Millersville; Calvin S. Kurtz, Elverson, J Carvell & I. Martin Landis, Lancaster.

Menus With Lamb

By Mrs. Richard C. Spence

Meals cease being monotonous when one looks to lamb and chooses from the variety of roasts and chops appearing in the refrigerated meat cases of modern meat and food markets.

Scientists are busy tracking down the source of lamb flavors — they discovered some time ago that the flavors that distinguish one kind of meat from another come from the fat that is normally present on any consumer cut of meat — not from the lean portions Patties made from lamb with all the fat removed had only the general taste of meat, not a distinctive lamb flavor.

High fat isn't important to good eating quality of lamb Tests done on rib loin and leg cuts varying from fat to lean, which are roasted in an uncovered pan at 325 degrees, ended up with about the same amount of tenderness In taste tests of the meat served warm from the oven, there didn't seem to be any difference in tenderness, juiciness or flavor between the lean and fat cuts

The leg of lamb is the most popular roast The full leg includes the sirloin and the leg, weighing about 8 or 9 pounds. Sometimes the retailer removes the sirloin section and markets it as a fine small oven roast weighing 2 to 2½ pounds Or he may cut it into sirloin chops, which are tender enough for charcoal, oven and pan-broiling

The rib, T-bone, and round bone chops are also fine for broiling The rib chops are cut 1 to 2 inches thick — they are often cut with 2 ribs per chop and are listed on a restaurant menu as double lamb chops The rib section also makes a fine small oven roast and is called a rack of lamb unless it is tied into a circle. Then it becomes a crown roast. The T-bone lamb chops are highly prized for broiling because of their meatiness and tenderness. A T-bone chop cut 1-inch thick may weigh as much as 4 to 6 ounces.

The round bone shoulder chop weighs from 5 to 7 ounces when cut ¾ inch thick and because it is a little less tender and less picturesque than the T-bone and rib chop, usually is a little cheaper. This chop is also fine for broiling.

The blade bone chop, especially good for braising, is cut from the shoulder section It is usually cut ½ to ¾ inches thick and weighs 1 to 8 ounces per chop.

TO BROIL LAMB CHOPS:

Chops should be cut 1 to 2 inches thick for broiling. Slash the edges of the chops in several places to prevent curling. Place the meat on the broiling rack located so that the surface of the meat is about 3 inches from the source of the heat Allow about 5 minutes per side for medium done chops cut 1 inch thick Add 1 minute per side for well-done chops Turn once Season before serving

TO BRAISE LAMB CHOPS:

Dip the chops into seasoned flour and brown in a small amount of hot fat Add liquid and cover, cook slowly on top of the range or in a moderate oven (350 degrees).

ROAST LEG OF LAMB WITH SPECIAL MARINADE

- 6 pound leg of lamb
- 3 cups pineapple-grapefruit juice
- ½ cup white wine vinegar
- 1 teaspoon rosemary, crushed
- ½ teaspoon oregano, crushed
- 1 bay leaf
- ¼ cup chopped parsley
- 1 carrot, scraped and sliced
- ¼ cup sliced green onions
- ½ teaspoon garlic powder
- 1 teaspoon salt
- 2 tablespoons butter or margarine
- 2 tablespoons flour
- Beef bouillon cube

Mix together juice, vinegar, herbs, carrot, onions, and seasonings and pour over leg of lamb which has been placed in a deep bowl. Allow lamb to stand in refrigerator 6 to 8 hours, turning once or twice Remove lamb from marinade, place on rack in a low-sided pan, and roast uncovered in a slow oven (325 degrees). Allow about 3 hours to bring the lamb to medium or 175 degrees on a roast thermometer Add ½ hour for a well-done (180 degrees) lamb leg Remove lamb from roasting pan. Melt butter in a pan Blend in flour Drain 2 cupfuls liquid from marinade and heat Dissolve bouillon cube in hot marinade Stir slowly into flour mixture and bring to a boil, stirring constantly. Serve sauce over sliced roast leg of lamb.

*****

FRUITY LAMB CHOPS

- 6 loin or shoulder lamb chops (about 2 pounds)
- Salt and pepper
- ¼ cup flour
- ¼ cup shortening or salad oil
- 3 tablespoons brown sugar
- 1 teaspoon grated orange peel
- 1 cup fresh orange juice
- ½ teaspoon mace
- 2 medium oranges, peeled, sliced into cartwheels
- 3 cups steamed rice

Season lamb chops with salt and pepper, coat lightly with flour. Heat shortening in large

skillet; brown chops on both sides. Remove chops, drain excess fat from pan. Add brown sugar, grated peel, orange juice and mace to skillet. Return chops to pan; cover and simmer 40 to 50 minutes, or until meat is tender. Add orange pieces; simmer until oranges are just heated. Serve with rice.

*****

CRANBERRY-ORANGE LAMB CHOPS

- 4 blade or round bone lamb chops, ½ inch thick
- 1 tablespoon shortening
- 1 cup cranberry juice
- 2 teaspoons cornstarch
- 1 tablespoon sugar
- 1 teaspoon salt
- ½ cup raisins
- 11 ounce can Mandarin orange sections, drained

Place shortening in skillet and brown lamb chops on both sides. Remove chops from pan and add cranberry juice. Blend in cornstarch and cook until sauce is thickened. Add sugar, salt, and lamb chops and simmer 25 minutes. Stir the sauce occasionally Add raisins and oranges and simmer an additional 10 to 15 minutes or until chops are fork-tender

*****

LAMB CASSEROLE

- 1½ cups cubed cooked lamb
- 2 tablespoons butter or margarine
- 3 tablespoons flour
- 1 teaspoon salt
- 1¼ cups milk
- 2 teaspoons prepared mustard
- ½ cup cubed process American cheese
- 2 tablespoons chopped pimiento
- 1½ cups cooked rice
- 1 teaspoon crumbled mint leaves
- ½ cup chopped ripe olives

Melt butter in skillet and blend in flour and salt. Gradually add the milk, stirring constantly until sauce is thickened. Stir in prepared mustard. Place the lamb, cheese, pimiento, rice, mint leaves, and olives in a 1-quart casserole. Fold in the sauce Bake for 20 minutes in a hot oven (425 degrees). Serve hot.

*****

LAMB STUFFED GREEN PEPPERS

- 1 cup cubed cooked lamb
- 4 large green peppers, stems and seeds removed
- 2 tablespoons chopped onion
- 1 tablespoon shortening
- ¼ cup water
- 2 tomatoes, cut into small pieces
- ½ cup pre-cooked rice
- ½ to ¾ teaspoon leaf oregano
- 1½ teaspoons salt
- ⅛ teaspoon pepper
- ½ cup water
- 1 teaspoon sugar
- 1 tablespoon shortening

Simmer peppers in water for 5 minutes Drain. Cook onion in 1 tablespoon of shortening until transparent. Add ¼ cup water, tomatoes, rice, oregano, salt, pepper, and lamb. Simmer about 10 minutes. Spoon lamb mixture into green peppers and place in a 1-quart baking dish to which ½ cup water, sugar,

For the Farm Wife and Family

Ladies, Have You Heard? . . .

By: Jane Thurston, Extension Home Economist

THURSTON

Shears and Scissors in Good Condition

Sharp cutting tools are a must for home sewing You can't cut out a dress with dull shears

First rule for shears and scissors care is to use these cutting tools for their intended use . that is to cut fabrics It may help to store shears and scissors where you won't be tempted to use them for odd jobs.

Careful handling pays off Dropping scissors or shears is one of the worst things you can do to them

Protect the points of your cutting tools. Between usings, keep each pair in a separate container or on hooks on a storage board

Keep scissors and shears in a dry place and keep them clean Before and after using, wipe the blades with a soft cloth so they won't collect lint

Your cutting tools need oiling . about every six months is enough Put a drop of sewing machine oil on both sides of the screw that holds the blades, than wipe off excess oil Always wipe the blades before cutting

About Nutmeg and Mace

Nutmeg is the dried seed of a peach-like fruit from the nutmeg tree Mace is the fleshly skin which covers the nutmeg

Whole mace is referred to as "blades of mace"

The flavors of nutmeg and mace differ, however, there is some similarity.

Nutmeg, available ground or whole, is almost essential in doughnuts and is excellent in beverages, especially eggnog

Mace, available ground, adds an exotic flavor to pound and yellow cakes, chocolate dishes, and is excellent for sauces and pies, especially peach and cherry

Nutmeg and mace may be used separately, together, or in combination with other spices.

Some Terms Used With Soap

All-water soaps . . . are soaps made with special oils to resist combining with minerals in hard water It's this reaction that cuts the lathering action and produces scum when ordinary soaps are used in hard water

Super-fatted is a term applied to soaps to which lanolin, cold cream, or some other extra fat or oil has been added. The addition of this extra fat neutralizes the slightly drying effect of soap on some types of skin . . . it doesn't lubricate the skin as face creams do.

● Have You Heard?

(Continued from Page 15)

Super-fatted soaps leave dry or sensitive skin more pliable and eliminate that stretched feeling

Medicated soap is advertised as helpful for skin conditions, such as acne Some medicated soaps are essentially the same as deodorant soaps . . . that is, they contain a bacteria-destroying ingredient This can be helpful in preventing the spread of an infection, and may help to clear up the infection itself Other medicated soaps may contain such substances as sulphur or tar to dry up excessive oiliness or flake off dead skin.

● For The Farm Wife

(continued from page 15)

and 1 tablespoon shortening have been added Bake in a moderate oven (350 degrees) for 35 to 40 minutes.

ZESTY BLUE CHEESE SAUCE AND LAMB

Sliced cold roast lamb
2 tablespoons butter or margarine
2 tablespoons flour
¼ teaspoon salt
⅛ teaspoon pepper
1 cup milk
¼ cup crumbled blue cheese
1 teaspoon Worcestershire sauce

Melt butter in top of double boiler Add flour gradually and cook until mixture becomes foamy Add salt, pepper and milk and stir until thickened Blend in blue cheese and Worcestershire sauce Serve over slices of cold roast lamb.

SPICY LAMB PILAF

2 cups cubed cooked lamb
3 tablespoons chopped onion
1 tablespoon shortening
4½ ounce can mushrooms, drained
2 cups water
1 cup rice
½ cup chili sauce
1 clove garlic, crushed
1½ teaspoons salt
½ teaspoon black pepper

Cook onion in shortening until transparent Add cooked lamb, liquid from mushrooms, water, rice, chili sauce, garlic, salt and pepper Simmer 45 to 60 minutes or until rice is tender Add mushrooms and cook an additional 5 minutes

TOUCH-OF-DILL LAMB CHOPS

4 blade or round bone lamb chops, ½ inch thick
1 tablespoon shortening
11¼ ounce can condensed cream of celery soup
½ cup water
1 teaspoon ground dill seed

Brown lamb chops on both sides in shortening in skillet Add soup, water and dill seed Blend well and simmer 35 to 40 minutes, stirring occasionally until chops are fork-tender

Added Work Needed

Sale or bargain garments that need major alterations before wearing may turn out to be costly, reminds Mrs Mae Barton, Penn State extension clothing specialist If a bargain means a cleaning bill or additional accessories to make it useful the garment might not be a wise buy

Buttons For Emphasis

Buttons can add emphasis to a costume when you repeat the color in piping, binding, or belt Too sharp a color contrast between buttons and garment gives a spotty effect reminds Bernice Tharp, Penn State ex-

BEST FOOD BUYS

Meat Values Higher Than Average

Area food shoppers should find better than average meat values this weekend as retailers take advantage of supply build-ups Seasonally large supplies of beef are now coming to market, reports Tom Piper, Penn State Extension Marketing Agent Marketings of fed cattle are expected to be 4-6 percent above a year ago during late February and March Best values will be found on chuck roasts, steaks, rib roasts and stewing beef.

Prices on fresh pork cuts have been nearly steady at the wholesale level and are generally a little lower than a year ago The same is true for cured hams, but bacon prices continue on the low side Little change is anticipated for broilers as supplies are about the same as a year ago.

Carrots, sweet potatoes and onions are the leading values at the produce counter This winter's carrot production, estimated at 600 million pounds, is 16 percent larger than last year and the second highest on record The sweet potato crop was 21 percent larger than in 1961 Onion prices are favorable to consumers, storage stocks are above last year and, the new Texas crop will be arriving at markets in March Potatoes are likewise in plentiful supply and reasonably priced.

Prices remain firm on top quality offerings of fresh fruit. Demand for apples remain good and prices are holding steady. Chilean fruits are beginning to arrive in quantity, with nectarines the heaviest single item First imported grapes and pears are on the way and will soon be in the market D'Anjou pears and grapefruit are available at generally unchanged prices

March will be the fourth month in a row that red tart cherries will make the plentifuls list. Stocks of canned and frozen cherries are well above average and prices are below those of a year ago Stocks of canned applesauce, apple slices, purple plums, cling peaches and pineapple are moderately larger than a year ago and can be used by shoppers to supplement the fresh fruit in their menus

Farm Women 21 Make Donations

A donation of $5 was voted for migrant work in Lancaster County by the members of Farm Women Society 21 at a recent meeting in the home of Mrs Earl Harnish.

Seventeen members answered roll call with "What I Want in my Dream House". Devotions were led by Mrs Harnish Mrs Sarah Jackson reported on a recent executive board meeting, and Mrs. Thomas Bradley conducted Valentine games Co-hostesses were Mrs. Parke Ressel and Mrs. Charles Ambler.

The next meeting will be held at 1:30 p m., March 14, in the home of Mrs. George Pickel Mrs. Morgan Foose and Mrs Melvin Meck will serve as co-hostesses.

IT'S AN IDEA HOME DECORATIONS

The housewife not blessed with a garbage disposal unit in her kitchen can do something about the appearance of the necessary garbage pail or can.

The pail may be painted a color complimentary to other colors in the kitchen. If wallpaper is a kitchen feature, the pail may easily be covered with paper of the same design.

If there is space, an alternative is to build a wooden box to accommodate the pail. The box may then be painted a selected color or covered with appropriate material. Box should open from top to permit easy access to pail.

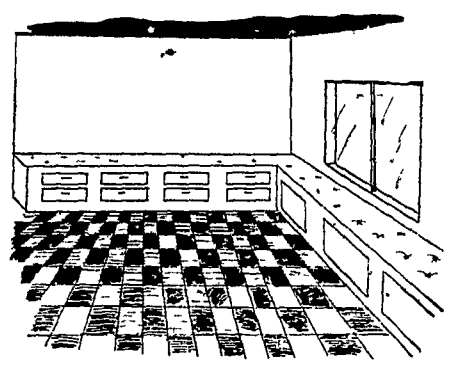
HERE'S AN IDEA HOME DECORATIONS



In many homes, the "TV room" in the basement doubles as a playroom for the kids and a workroom (for ironing, etc.) for mother. Usually, this creates a "space" problem. Chairs are needed, yet these chairs take up play and work space when something is going on other than TV-ing.

One solution is to do away with chairs and build "storage cabinets" at floor level against unused walls of the room. Cabinets would open from front, could be partitioned to give mother space for storing ironed and finished garments. Top of cabinets, at convenient sitting height, could be padded for comfort and, in emergency, could also provide sleeping space.

Cabinets give ample sitting space, leave center of room free for play and work activities.

Conservationist Attends School

W. Martin Muth, Soil Conservationist in Lancaster County attended a four-day meeting of U. S. Soil Conservation Service employees in Pennsylvania at Lebanon February 11 through 14. Subjects discussed by State and National conservation leaders ranged from soil and water conservation on the farmlands to river basin development work in the Susquehanna, Delaware and Potomac River Basins.

The conservation job in Pennsylvania was outlined by State Conservationist, Ivan McKeever, who directed the workshop. McKeever said that one of the big jobs in Pennsylvania is planning the multiple use of our natural resources. Our land and water must be used for many purposes to satisfy the increasing demands placed upon them by our modern society.

The State Conservationist reported that a major objective of the meeting was to emphasize ways the Service can assist Soil Conservation Districts with their increasing responsibilities in soil and water management, flood prevention and recreation.

There are 61 Counties in the Commonwealth organized as Districts. Over 25 thousand farmers are cooperating with these Districts in their programs of soil and water, woodland and wildlife conservation.

Farm Women 18 To Host 15

Members of Farm Women Society 18 have made plans to entertain members of Society 15 at a luncheon meeting on Saturday, March 16, at 12.30 p.m. in the home of Mrs. Christian H. Shenk, 880 Dorsea Road.

At a recent meeting of Society 18, Mrs. Frank Eshleman reviewed the book, "Love Is Eternal," by Irving Stone. The meeting was held at the Church of the Brethren, East Petersburg, with Mrs. Wilbur Carper as hostess. Judy Carper presented piano selections and Mrs. Willis Esbenshade led devotions.

Mrs. Benjamin Greider presided. Roll call was answered by the women who gave the definition of their names. A food sale will be held Thursday, March 7, at the Lancaster Farm Bureau during the open house and anniversary sale, which starts at 9 a.m.

Iron and steel companies in the United States spent about $925,000,000 for capital improvements during 1962.

Farm Women 12 Plan Bus Trip

Members of Farm Women Society 12 have planned to take a bus trip to a Spaghetti factory in Hatboro, Pa.

At a recent meeting in the home of Mrs. William Shenk, Lancaster R6, the society announced plans to leave the Conestoga Transportation terminal, 825 E. Chestnut, Lancaster, at 7:30 a.m. on May 3 and return at 7 p.m.

At the meeting 550 large cancer pads were made for the Lancaster County unit of the American Cancer Society.

Mrs. Kenneth Eshleman, county Farm Women president, was the guest speaker. Mrs. Robert Hocking, president of Society 12, was in charge of the meeting.

Local Growers Attend Meeting Of Potato Ass'n

Potato growers from this area are planning to be among the more than 300 expected at the 12th Annual Pennsylvania Potato Growers Institute March 6 and 7 in Hotel Lycoming, Williamsport. Included in the full two day program will be the 47th Annual Meeting of members of the Pennsylvania Co-operative Potato Growers Association, sponsors of the institute.

State, national and international trends affecting the entire potato industry will be presented for the benefit of Keystone State growers, according to Robert W. Hardwood, Wattsburg, Erie County, president of the co-op.

Leland H. Bull, State Secretary of Agriculture is a banquet speaker on the evening of March 6. Penn State University will be represented by five program speakers, two will come from the U. S. Department of Agriculture, one each from the U. S. Food and Drug Administration, the American Farm Bureau Federation, a farm chemical firm and a potato chip company.

One of the largest acreage potato growers in California, W. B. Camp, Jr., president of the National Potato Council, is to tell about the growing and marketing of potatoes in his home state.

Lampeter FFA Has Program In Assembly

The Garden Spot Chapter of Future Farmers presented an assembly to the faculty and students of Lampeter-Strasburg High School last Friday. The assembly was presented in observance of National FFA Week, February 16-23.

The assembly was divided into four parts. The first part being a skit entitled "A Day in the Farm Mechanics Shop." It illustrated the type of instruction the boys receive in farm mechanics as part of their vocational agriculture course.

The second part of the assembly was the awarding of Farm Project Record Book awards to the following boys:

Roy Slaymaker — gold medal for Swine and tobacco projects.

John Geyer — silver medal for farm work experience.

Donald Herr — silver medal for tobacco project.

Stanley Graver — bronze

Farm Co-op Reelects Davis

JONATHAN DAVIS

SPRINGFIELD, MASS., February 20 — Re-elected president of Eastern States Farmers' Exchange for his fifth term today at the cooperative's annual meeting was Jonathan Davis, a fruit grower and dairy farmer of Sterling Junction, Mass. Willard H Kimmel ot Shelocta, Pa., was re-elected chairman of the 13-man executive committee of the Board of directors.

Newly elected vice presidents were William S Wadsworth of Farmington, Conn., and Richard Croner of Berlin, Pa Edward H. Young of Dover, N H., was re-elected vice chairman of the executive committee All are prominent farmers in their communities

Chief executives on the Eastern States management staff were also re-elected. They are William D. Milsop, general manager; William H. Prigmore, assistant general manager; and Mildred E. Pike, treasurer.

Sixteen farmer-members were re-elected and two were newly elected to the 53-man board of directors The two new board members are A. Morrison Ennis of Brooklyn, Conn., and Harold B Short of Georgetown, Del.

4-H Leaders To Hold Banquet

Recognition certificates and pins will be presented to 4-H leaders for years of service during the annual banquet of the Lancaster County 4-H Leaders' Council on March 4 at 6 p.m. in Hostetter's banquet hall, Mount Joy.

The banquet is being sponsored by the 4-H county council to honor their leaders for their service to the 4-H club.

This year, the council is planning to honor several commercial firms which have made outstanding contributions to the county 4-H program.

Dairy Show Committeemen Schedule Meet

County agents and 4-H dairy club leaders will meet next month to plan for the 1963 Southeast District Dairy Show.

The meeting, called for 10 a.m., Wednesday, March 13, at the Southeastern Pennsylvania Artificial Breeders Cooperative stud on the 230 bypass, will include a luncheon and an afternoon session.

County agents and 4-H leaders will be the guests of the SPABC cooperative on that day.

Lampeter FFA

(Continued from Page 17)

medal for Dairy, corn and tobacco projects.

The third part was a skit entitled "The FFA in Action," which portrayed the many activities of the FFA throughout the year Some of which are the Livestock Judging Contests at the Lampeter Fair, the leadership training conference, the Vegetable Seed Service program, the annual Scrap Drive, Parliamentary Procedure Contest, and the Summer Educational and Recreational contests.

The announcement of the Chapter Sweetheart for the 63 school year was the climax of the program Miss Judy Hackman — a member of the Junior Class was selected by the FFA members as their Chapter Sweetheart for the coming year. She was presented with the official FFA Chapter Sweetheart Jacket by last year's Sweetheart Miss Karen Sue Brown.

Time To Cook Good Breakfast

You don't have to get up at dawn to cook good, hearty breakfasts, believes Louise Hamilton, Penn State extension nutrition specialist. Bacon strips and toasted English muffins or corned beef hash patties with poached eggs are ready in minutes These breakfasts are high in protein so they won't let you down by midmorning

Egg Production Down 6 Per Cent From Last Year

Pennsylvania laying flocks laid 269 million eggs during January 1963, 6 percent less than a year earlier according to the Pennsylvania Crop Reporting Service. This was the lowest January output since 1949.

There were 15.4 million layers in the State's laying flocks in January, slightly greater than the total in December, but 3 percent less than a year earlier. The January production of 17.42 eggs per bird was the same as the December average, but 2 percent less than a year ago. There is normally an increase in laying rate from December to January. The comparatively low January 1963 rate of lay was principally due to the below average cold, snowy weather experienced during January throughout the Commonwealth.

Poultry losses resulting from disease, accident, exposure, etc were nearly the same as a month earlier, but slightly higher than a year ago Cullings, at nearly 6 percent of the total number of layers, were up seasonally from December, but the same as a year ago. Fewlaying flocks during January er pullets were added to the than a month ago, but more than January 1962 Growers expect to purchase 4 percent more chicks in 1963 than they did in 1962.

January egg prices, at 42 cents a dozen, same as a month earlier but 2 cents above a year ago. Prices received for farm chickens held steady at 13 cents per pound, while broiler prices were steady at 17 cents per pound. The egg-feed ratio was down a point, as Pennsylvania now gets only 11.3 pounds of feed for a dozen eggs.

U. S. Egg Production

Farm flocks in the U. S. (excluding Alaska but including Hawaii for first time) produced 5,187 million eggs during January, 2 percent less than in January 1962 The rate of egg production in January was 17.0 eggs per layer compared with the January 1962 rate of 17.1 and the 1957-61 average of 16.7 eggs. the country were below last Production in all regions of year except the South Central which was up 4 percent.

Egg-O-Rama Is Planned

An egg producers' meeting billed as "Egg-O-Rama" has been scheduled for February 25 at 7 15 p m in the Penryn fire hall

Five successful poultrymen will discuss problems in the production and marketing of eggs

Walter Augsburger, Reinholds, will discuss "The Market Egg Producer", while "The Hatcheryman" will be the subject of Jay Greider, Mount Joy. Robert Martin, York, Penna , a representative of the sponsoring firm, Eastern States Farmers Exchange, will discuss "The Feed Industry John Melhorn, Producers Cooperative Exchange, Coatesville will have his subject, "Egg Marketing". "Poultry Health" will be the subject of Dr George J Christie, , Eastern States, West Springfield, Mass

The speakers will present the view of the egg industry from their own point of view.

When buying gloves for children, it's a good idea to take them with you if possible. But if you can't measure each child's hand when he closes it This will be a good guide for the size It's better to have gloves or mittens a little too large than a little too small.

Pennsylvania Milk Output Continues Up

Milk output per cow on Pennsylvania farms during January was estimated at 675 pounds or 23 pounds above a month earlier and 35 pounds above the January 1961 average, according to a report released this week by the Pennsylvania Crop Reporting Service

The increase from December to January was about equal to the average seasonal increase On a daily basis the milk production averaged 21 77 pounds during January this year or 1.12 pounds above the same month a year earlier and 2.87 pounds above the January 1956-60 average.

Milk production on Pennsylvania farms during January totaled 583 million pounds — 20 million pounds or 3 percent more than the January 1962 production During 1962 7,020 million pounds of milk was produced This was 123 million pounds or 2 percent above the 1961 production. Based on the July 1, 1961, Pennsylvania population estimate, January milk production was at a level that provided 1 64 pounds or 76 quarts per capita per day.

There were an estimated 864,000 milk cows on Pennsylvania farms during January 1963, or about 2 percent below the same month a year ago as the number of milk cows continue to decline

Reporting dairymen were feeding grain and concentrates at a rate of 10 9 pounds daily per cow during January or up slightly from the preceding month and approximately a pound more than the estimate for January 1962. Based on the trend of the past few months it appears that the rate of feeding grain may be reaching a leveling off point.

For January 1963, the blend milk price was estimated at $4 80 per cwt — down 15 cents from a month earlier and a dime lower than the previous January The blend milk price was $5.25 per cwt in January 1959, and the same month a year later it took a 25 cent decline, however, since that time there has only been a nickel or dime decline.

U.S. Output Down

Milk production in the United States during January is estimated at 10,043 million pounds, down 0 3 percent from the record high for January set in 1962, but about 3 percent above the 1957-61 average for the month Estimates for Alaska and Hawaii are now included in the U.S. totals. The seasonal increase in milk production from December to January was 2.3 percent this year, compared with 2.7 percent a year earlier. Relative to population, January milk production amounted to 1.72 lbs. per person daily, compared with 1.76 pounds a year ago.

Lower Rates Are Continued By Railroads

HARRISBURG — State Agriculture Secretary L H Bull today announced that in accord with his request eastern railroads have agreed to a new move for speeding hay shipments to farmers in Pennsylvania's 55 drought disaster counties

Specifically, Secretary Bull explained, the railroads will make available more freight cars for hauling hay and will apply the same tonnage rates to both 40-foot and 50-foot cars

Ordinarily hay is shipped in 50-foot cars because of the advantage in larger bulk, the shorter cars operating at a disadvantage except at higher rates In addition, increased demand for other industrial use has created a shortage in both type cars, a situation which is to be eased in favor of farmers, many of whom are reported in critical and urgent need of hay for their dairy and beef cattle herds

Early last fall eastern railroads granted a 25 per cent reduction in freight rates for hay shipped to drought disaster areas, a concession which will continue in effect until next March 31

The effective date for the new concession by the railroads will be today Feb 23 Sec Bull said announcement of the action by the railroads was received through the office of the president of the Pennsylvania Railroad, A J Greenough, Philadelphia

Game Protector Is Appointed

Charles J Williams, a native of Canonsburg, Washington County, Pensylvania has been assigned to duty as District Game Protector in Lancaster County Williams was graduated from the Game Commission's Ross Leffler School of Conservation, located near Brockway, Jefferson County, on February 9, 1963 and received his commission as a Pennsylvania Game Protector.

CHARLES J. WILLIAMS

He will fill a vacancy created by the retirement of former District Game Protector John Haverstick This district has been serviced by Game Protector John Eicholtz, Strasburg, since the retirement of Mr. Haverstick.

Williams is a graduate of Peter's Township High School and attended Waynesburg College. He served in the U. S. Marine Corps during the period 1954-1957, and is a member of the Waynesburg Sportsmen's Club and the Peter's Township Volunteer Fire Department. Prior to his enrollment for training by the Game Commission, Williams worked as an apprentice draftsman for a Canonsburg business firm

The newly assigned Officer was a member of the 11th Student Officer Class to graduate from the Training School since it was established in 1936 He was selected through competitive examinations from more than 400 applicants for the 10-month period of training given all field officers of the Game Commission.

The officers are required to successfully complete courses in biology, land management, Game Law, legal procedure, police sciences, game management and propagation, public relations and public speaking. The course of study includes classroom instruction, field trips and two months of field training under the supervision of experienced district game protectors.

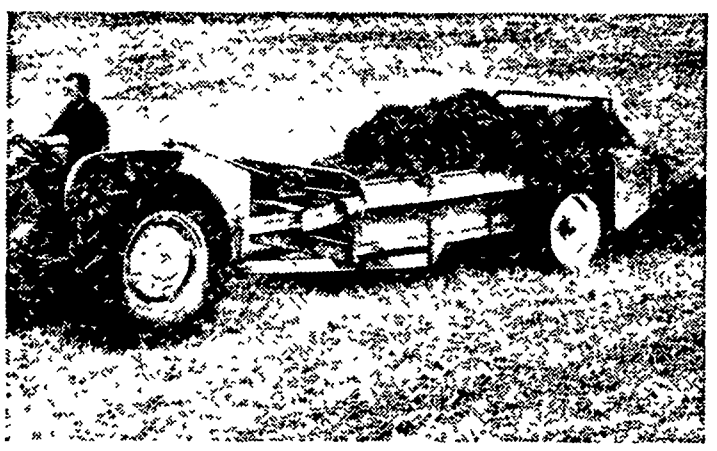
New 140-bushel spreader



STRENGTH and QUALITY

where it counts in a Big Spreader

Look under the box, see how knee braces under compression hold box tight at the top. Notice the full-width, heavy-duty axle.

Look at the beaters and paddles. Paddle-centered delivery from the beaters for uniform spreading. Less buildup on paddle shaft

Look at the front end — recessed raddle chain with full-length idler shaft Raddle hugs the floor surface, reduces lodging of cobs or frozen material.

Notice the armored sides — protection against loader damage

See the clutch-protected power line and heavy-duty, roller-driven chain

The Model 140 PTO spreader is quality-built for year-round convenient performance Let us show you.
